Solid state relays with integrated monitoring

Fault handling is a recurring headache for machine builders due to the time consumed to identify the fault and the negative effect it leaves on productivity. Having machine components that are able to indicate where the fault is happening and distinguish between certain failures means less maintenance costs and minimised machine downtime.

With the **RG..M** series, Carlo Gavazzi has enhanced the versatility of its successful RG range of solid state relays to include monitoring functions on top of the switching capabilities in a slim 17.8mm footprint. Detection of system faults (mains loss, load loss, SSR open and short circuit), SSR internal error and supply out of range are visualised on the front façade of the SSR via LEDs and can also be monitored remotely via a transistor output integrated in the SSR.

Timely failure detection in plug and play solutions

Main features

- Monitoring for system fault (mains loss, load loss, SSR open and short circuit), SSR internal error and supply out of range
- 1-phase zero cross AC switching
- Ratings for RGC..M: up to 660 VAC, 65 AAC
- Ratings for RGS..M: up to 660 VAC, 90 AAC
- 17.8 mm platform, up to 70 mm for RGC > 30 AAC
- DC control voltage range: 4 - 32 VDC
- 24 VDC supply voltage
- Up to 18000 A²s for Type B Miniature Circuit Breaker protection
