

Press Release

THE NEW SERIES OF IP67 CORD-SETS

CON Series, the single and double-ended solution.

Lainate, February 2025 - Carlo Gavazzi Automation, the international electronics group with activities in the design, manufacture and marketing of electronic equipment, is pleased to announce the launch of its new series of IP67 PVC cord-sets, the CON series.

Expanding beyond our existing sensor families, we are now also producing single-ended and double-ended A-coded cord-sets at our production facility in Lithuania. This further enhances our ability to offer comprehensive solutions for sensor applications.

The CON cord-sets are designed to meet key customer requirements, such as a rounded surface to minimize dust accumulation, label holders to ensure neat installations and simplify future maintenance, and an arrow indicator to quickly align the notch during installation.

The double-ended variant of the CON cord-sets offers the optimal solution for use with our IO-Link masters.

“With the introduction of this new series of cord-sets,” says Davide Boschetti, International Product Specialist, “Carlo Gavazzi is now even more versatile in providing connectivity solutions.”

Main technical features

- A-coded single-ended and double-ended variants
